How to measure your garden correctly

Artificial grass has developed dramatically over the last 10 years and now is an easy DIY product to install. If your handy at DIY; you can lay your own artificial grass and save yourself a fortune! Our installation guide will help you plan your project and allow you to easily work out the costs involved.

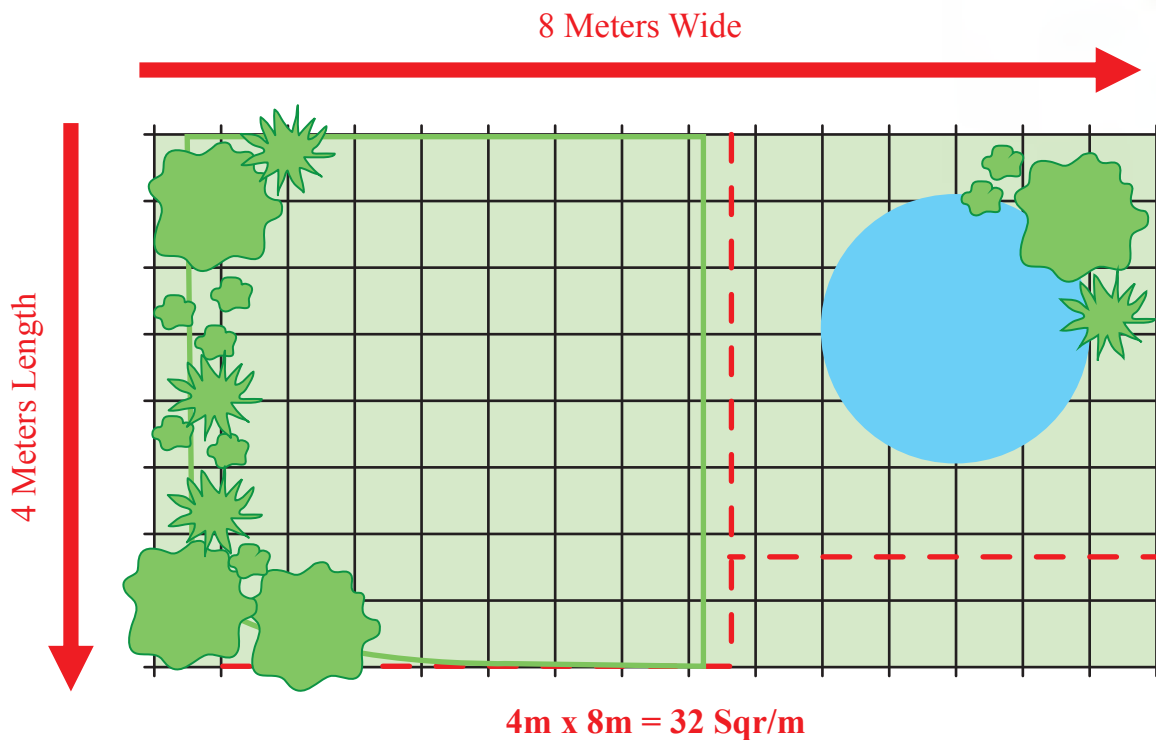

First things first making sure you have the correct measurements.

How to measure your garden correctly

Tip: Using squared paper may be helpful.

1) N.B: Artificial grass has a pile direction in the width and should point towards your most desired viewing point. In a back garden this is towards the house. On a front lawn it should point to the street, start by measuring your **TOTAL WIDTH**

2) Then measure your **TOTAL LENGTH**.

Meters	Feet
0.5m	1ft 7inch
1m	3ft 3inch
2m	6ft 6inch
3m	9 ft 10inch
4m	13ft 1inch
5m	16ft 4inch
10m	32ft 9inch
25m	82ft

Prefer to use Feet & Inches?
You can find an easy to use converter [here](http://bit.ly/feet-to-meters)
<http://bit.ly/feet-to-meters>

Tip: To work out you total square meter required. Multiply your (length) x (width) = (Total Sqr/m)

 **Jot down your measurements for later:**

Length: _____ Width: _____

No Mud, No Mess, No Mowing!

Ensuring you order the correct rolls

3) Now you have your measurements. You can easily work out how many rolls you require, all the artificial grass from Great Grass comes in 2m and 4m widths up to a maximum length of 25m.

Below is an example of a garden where you would require two rolls; each 4 meters wide to cover the total width. (Remembering the pile on both rolls of grass should point the same way.)

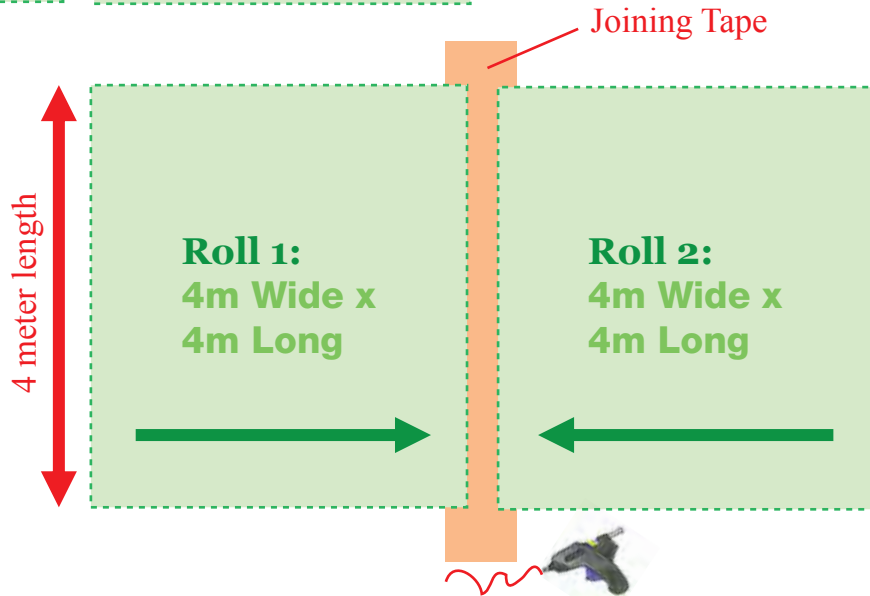

4) All that is left to do is work out how much tape and glue is required. In this case, there is only one join at 4 meters in length.

As such you would require 4m of tape and two tubes of glue (each tube of glue can join 3m of grass together)

Not down your required sizes and amount of rolls

-  Sizes:

Our clients include:

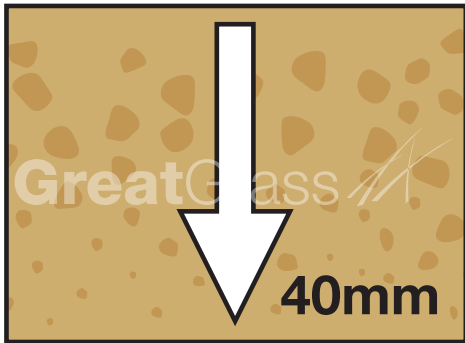

Before you begin

We assume at this point you have already measured your garden using our easy measuring guide; which can be found [here](#) and you have ordered your artificial grass from Great Grass. Artificial Grass is an easy DIY product to install and has been completed by thousands of our customers.

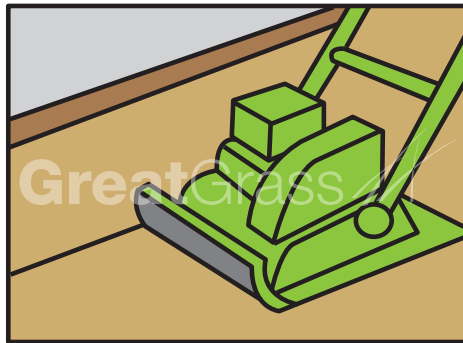

Instructions: How to replace a natural lawn with a Great Grass artificial lawn

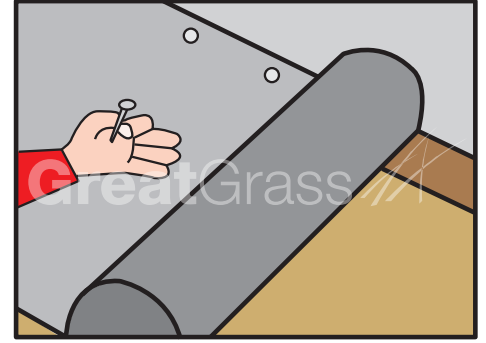

Step 1 Remove your top layer of turf and continue digging down to 40mm depth. Flatten the earth down. Wooden timber battens can be installed around the perimeter to allow you to screw and secure your artificial grass into place.

Alternatively, metal pins can be used around the edge of the grass.

Step 2 Fill the area between the wooden battens up to the top using Grit Sand/Sharp Sand.

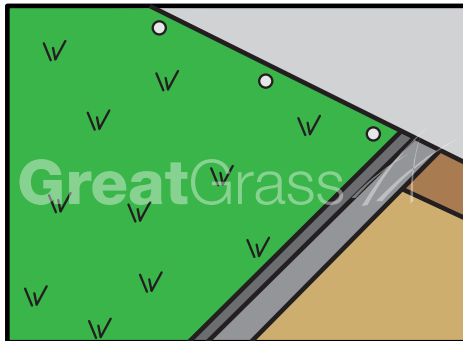

Spread, level and compact the sub base with a hand roller or vibrating plate until flush with the top of the wooden battens.

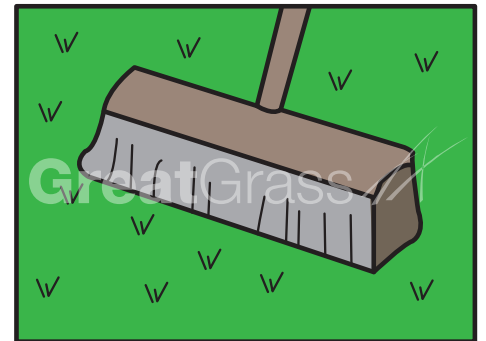

Step 3 Lay your weed barrier over the sand, pegging the weed barrier to the wooden battens when possible to help hold it in place.

Step 4 Using a sharp Stanley knife; carefully cut around obstacles and cut away any excess artificial grass material that isn't required.

Step 5 Using wood/decking screws fix your new artificial lawn directly over and onto the wood battens. Trimming any excess grass off using a sharp Stanley knife.

Step 6 Using a stiff yard brush, brush the artificial grass firmly to help the pile stand.

(Note: it is not unusual for your artificial grass to be somewhat flat for a week or two. Just continue to brush during this period.)

Joining two sections together? See below

Maintenance: We advice brushing your artificial grass thoroughly every 2 to 3 weeks to ensure your grass looks great all year round, whilst remaining free from any natural growth and debris.

No Mud, No Mess, No Mowing!

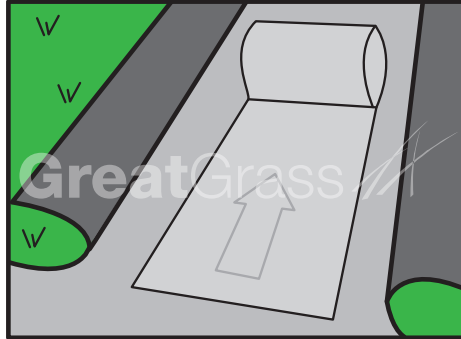

How to join two sections together

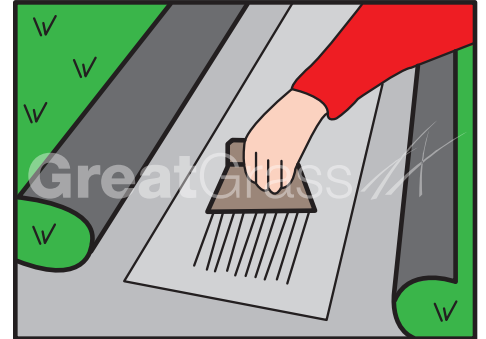

Step 1 Adjacent rolls should be laid together with the grass pile pointing in the same direction.

Butt both surfaces together ensuring a straight line.

Step 2 The seaming tape and glue is used to permanently join the two rolls together.

Unroll the seaming tape along the seam line, ensuring equal tape laid centrally along the seam, under the artificial grass edges.

Step 3 Apply the adhesive to the top surface of the seaming tape. Fold artificial grass edges onto the joining tape and glue. Use weight on top of the artificial grass over night to enhance the strength of the joint.

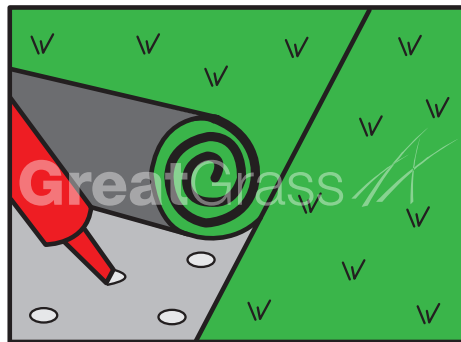

Installing your artificial grass lawn onto a hard surface such as concrete

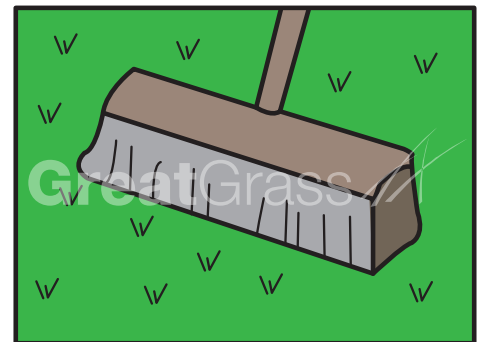

Step 1 Remove surface imperfections

Thoroughly clean to remove all loose concrete, dirt, paint, grease, etc that will prevent good adhesion. Attempt to flatten any leveling issues using compacted grit sand where needed.

Please Note There are no warranties regarding this installation information nor any results guaranteed by using the installation information.

Step 2 Rolls can be loose laid or fixed with a spots of outdoor adhesive or with double-sided adhesive tape.

Step 3 Using a stiff yard brush, brush the artificial grass firmly to help the pile stand.

(Note: it is not unusual for your artificial grass to be somewhat flat for a week or two. Just continue to brush during this period.)

Maintenance: We advice brushing your artificial grass thoroughly every 2 to 3 weeks to ensure your grass looks great all year round, whilst remaining free from any natural growth and debris.
